

Practice Assignment 5

Practice Assignment: Working with Firebase Cloud Messaging in React Native

Objectives:

- Learn how to integrate Firebase Cloud Messaging (FCM) to send and receive push notifications in a React Native app.

Exercise 1: Integrate Firebase Cloud Messaging to Receive Notifications for New Notes

Requirements:

- Configure Firebase Cloud Messaging (FCM) in React Native.
- When a user adds a new note to Firestore, the system should send a push notification to all devices with the app installed.
- When a user taps on the notification, the app should open and display the note list.

Suggested Technologies:

- React Native Firebase Messaging** for handling push notifications.

- **Cloud Functions (or Firebase Admin SDK on the server)** to send notifications when new notes are added to Firestore.
- **React Navigation** to navigate to the notes screen when the notification is tapped.

SUBMISSION REQUIREMENTS (Important)

To complete this assignment, students must submit the following:

1. **Source Code**
2. **Demonstration Video (Screen Recording)**
 - A video (about 3 minutes or more) demonstrating how the app works.
 - Should include:
 - Receiving a push notification when a new note is added.
 - Clicking the notification to open the app.

SUBMISSION FORMAT

- **Zip File:** The source code should be zipped and named as `StudentID_Lab5.rar`.
- **Video:** Should be uploaded separately or included in the zip file or YouTube link.
