

Practice Assignment 4

Practice Assignment: Working with Firestore Database and Firebase Cloud Messaging in React Native

Objectives:

- Understand how to use Firebase Firestore to store and manage data.

Screen 1

Screen 2

Exercise 1: Build a Note-Taking App Using Firestore

Requirements:

1. Configure Firebase Firestore in a React Native project.
2. Build a simple UI with:
 - o An input field for entering notes.

- o A "Save Note" button to store the note in Firestore.

3. Implement the following functionalities:
 - o **Add a new note** to Firestore.
 - o **Display notes** in real time from Firestore.
 - o **Delete a note** from Firestore when the user taps on it.

Suggested Technologies:

- React Native with Firebase Firestore.
- FlatList for displaying the notes.
- Firestore's onSnapshot () to update the note list in real time.

SUBMISSION REQUIREMENTS (Important)

To complete this assignment, students must submit the following:

1. **Source Code**
2. **Demonstration Video (Screen Recording)**
 - o A video (3-5 minutes) demonstrating how the app works.
 - o Should include:
 - Opening the app.
 - Adding, displaying, and deleting notes.

SUBMISSION FORMAT

- **Zip File:** The source code should be zipped and named as StudentID Lab4. rar.
- **Video:** Should be uploaded separately or included in the zip file or youtube link.
